

The Building Technologies Program: **Building Toward a Better Future** 

Roland Risser February 9, 2012 NASEO

# BTP's Buildings Program uses an Integrated Approach to Deliver Value

**ENERGY** Energy Efficiency & Renewable Energy

## **Research & Development**

- Develop technology roadmaps
- Prioritize opportunities
- Solicit and select innovative technology solutions
- Collaborate with researchers and market performers
- Solve technical barriers and test innovations to prove effectiveness
- Measure and validate energy savings

## **Market Stimulation**

- Identify barriers to "speed and scale" adoption
- Collaborate with industry partners to improve market adoption
- Increase usage of products and services
- Work through policy, adoption, and financial barriers
- Communicatee the importance and value of energy efficiency
- Provide technical assistance and training

## **Codes and Standards**

- Establish minimum energy use in a transparent public process
- Protect consumer interests
- Reduce market confusion
- Enhance industry competitiveness and profitability
- Expand portfolio of energy efficient appliances and equipment
- Raise the efficiency bar

# **Commercial Initiatives to Drive Energy Savings**

# Building the Commercial Retrofit Industry: Better Information = More Demand

- ENERGY STAR Portfolio Manager has been widely adopted for tracking commercial building energy use
- DOE is working with EPA to create an Asset Rating program for commercial buildings that will allow:
  - Owners ➤ Quick identification of system-level opportunities for improvement
- Appraisers ➤ Standardized metrics of energy performance for building's physical assets
  - Buyers ➤ An "apples to apples" comparison of similar buildings while controlling for operations, maintenance, and occupant behavior (all of which are unique to the operator/user)

<u>September, 2011</u>: Request for public input on program design issues

<u>Spring 2012</u>: Pilot testing of asset rating program Fall 2012: Updated asset rating made more widely available

Building

Energy

Outcomes

# **DOE Building Performance Database (BPD)**

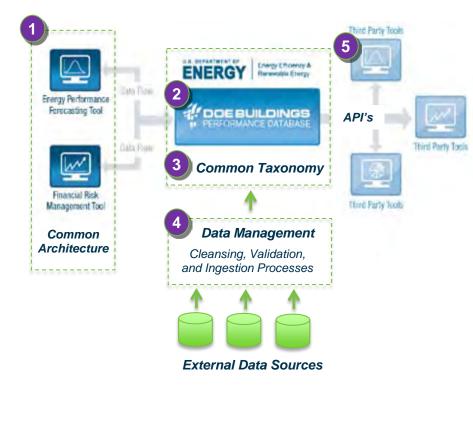

- A **decision-support platform**, comprised of data from commercial and residential buildings and data analysis tools
- Initial tool set includes:
  - An energy savings forecasting tool that uses an actuarial based methodology to develop energy savings distributions
  - A financial tool that forecasts cash flows from these energy savings distributions
- Enables **risk based analysis** of energy efficiency projects
- Enables engineering and financial practitioners to evaluate energy efficiency products and services and make better informed decisions on completing and investing in these improvements

# The DOE Building Performance Database (DBPD) Includes Five Key Components

U.S. DEPARTMENT OF ENERGY

Energy Efficiency & Renewable Energy

#### **DBPD System Overview**

## **Key Components**

- <u>Applications</u> Web-enabled tools that
  leverage data to forecast energy savings
  and related cash flows. As more usecases are identified, additional tools will
  be created and released to the market.
- 2

3

- <u>Data Warehouse</u> a platform to house the Energy data within the standard taxonomy.
- <u>**Common Taxonomy**</u> a standardized "data model" to organize energy use and building characteristic data
- Data Management processes and tools to support the on-boarding and validation of data from multiple sources
- 5
- <u>**3**rd Party Tool Support</u> API's that allow 3<sup>rd</sup> Party developers to create applications that use the data within the DBPD

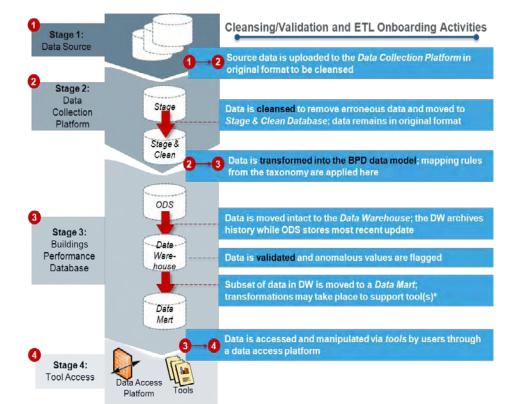

# Data Collection Standardization is Important

Energy Efficiency & Renewable Energy

The current data in the BPD (~50,000 buildings) comes from 6 data sources:

- ► CBECS
- ► RECS
- University of Dayton
- Energy Star
- ► GSA
- Gainesville Green

However, before the data on-boarding process even starts, these data sets required extensive work.

U.S. DEPARTMENT OF

Going forward, standardized data collection and building descriptions will enable a much simplified process for importing data into the BPD **AND** enabling third party energy data related solution developments The <u>Standard Energy Efficiency Data Platform</u> (SEED) is a software tool that allows state and local governments and building owners to quickly and easily create their own database using a standard building energy performance taxonomy, and easily share selected data with other parties as needed.

#### **Key Accomplishments**

- Extended DOE Buildings Performance Database taxonomy for SEED needs
- Integrated connection to Portfolio Manager
- Six cities/states (Seattle, San Francisco, Austin, NYC, DC, CA) helped design SEED
- Beta test launched (January 2012) with partner cities/states

#### **Deployment in the Coming Months**

- Partner cities/states load their data into SEED from Portfolio Manager and other systems
- Work with partners to shape data collection and data management for energy audit data
- Create API to allow public sharing of structured data
- Work with data analysts to encourage creation of tools
- Communicate value of standard taxonomy and SEED to larger audience

# The SEED Platform is Customizable

### **SEED is:**

#### A Database

 Building owners, governments, or other entities can use SEED to store building energy performance data according to a standardized, extensible taxonomy

#### A Data Transfer Mechanism

- SEED will allow data transfer into and out of Portfolio Manager, it will also allow data collection via customized web forms.
- SEED will include a standard API which a data owner can use to share selected data with third parties.

#### **An Analysis Platform**

- SEED provides a standard structure for building energy data to support a variety of analyses.
- Because it is open source and the database structure is publicly documented, third parties can build applications for SEED owners to use to analyze their data in new ways.

#### **Benefits:**

#### **Open Source Platform**

- Low or no cost for state/local government to design
- Set up in a matter of minutes
- Low cost to maintain
- Security and backup/redundancy in place

#### **Flexible Input Mechanisms**

- Portfolio Manager web services
- Spreadsheet upload
- Additional web services in future
- Direct entry through web forms in future

#### Standardization between jurisdictions

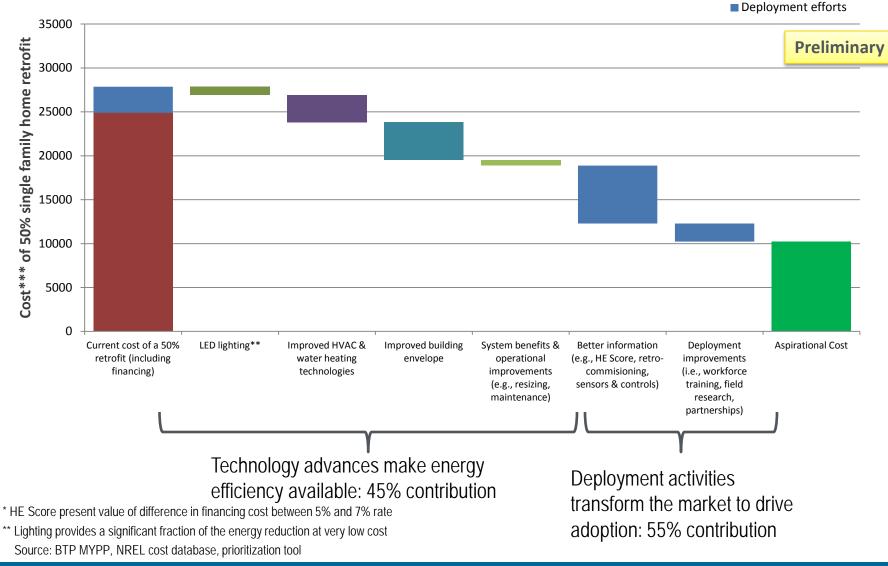

- Comparison of approaches & shared learning
- Sharing of resources
- Standardized analyses
- 3<sup>rd</sup> party creation of standardized apps

# Residential Initiatives Drive Home Energy Efficient Ideas and Savings

# Buildings' Technology, Deployment, and Standards Efforts Work Together to Reduce the Cost of Energy

#### Example: deep retrofits for single family homes

Energy Efficiency & Renewable Energy

U.S. DEPARTMENT OF

**ENERG** 

# Residential Strategies Support Increased Market Adoption of Energy Efficiency

U.S. DEPARTMENT OF

Energy Efficiency & Renewable Energy

Goal: Establish a selfsustaining energy efficiency market that meets the needs of American households

# Market Priming Activities

- Promote market-driven business models and establish financing mechanisms for rapid adoption of effective, high quality, low-cost energy improvements;
- Give homeowners the information and tools to make smart energy decisions;
- Foster a trained and trusted workforce to implement energy improvements that address savings, comfort, health and safety; and
- Prepare builders to take advantage of the market differentiation associated with energy efficiency.

The Better Buildings Initiative Covers a Wide Variety of Residential & Commercial Building Programs

Energy Efficiency & Renewable Energy

BETTER BUILDINGS U.S. DEPARTMENT OF ENERGY	Vision: A self-sustaining market for building energy efficiency retrofits that results in economic, environmental, and energy benefits across the United States
Better Neighborhoods	<ul> <li>41 recipients of \$508m;</li> <li>Focused on creating business models for EE upgrades in whole communities <u>BetterBuildings.energy.gov/neighborhoods</u></li> </ul>
The Better Buildings Challenge	<ul> <li>Engages CEOs and University Presidents, recognizing their organizations for making actionable commitments to improve energy efficiency in their facilities <u>BetterBuildings.energy.gov/challenge</u></li> </ul>
Better Workforce	<ul> <li>Training the next generation of commercial building technology workers</li> <li>Launching a Building Construction Technology Extension Partnership</li> <li>Providing more workforce training in areas such as energy auditing and building operations</li> </ul>

This program hopes to save consumers approximately \$65 million per year on energy

bills.

# Better Buildings Neighborhood Program

Energy Efficiency & Renewable Energy

#### Goals Driving Financing Demand Retrofitting 150,000 buildings **21** Combinations (residential and commercial) → 32 Different 41 3-year grants of \$1.5 to \$40 million Approaches Developing each – six grants to State Energy **Optimal Service** Programs Delivery Using over \$500 million in grants to **Business** leverage over \$3 billion in additional Workforce **Data and** Models resources **Evaluation** Creating or retaining approximately ➔ 9 Models Being 12 Evaluations 30,000 jobs Tested **Being Performed** Reducing the cost of retrofit program

#### Accomplishments

 Thousands of building efficiency upgrades have already been completed through the Better Buildings program

#### 14 | Building Technologies Program

# Home Energy Score – Scoring Tool

Energy Efficiency & Renewable Energy

Contact Us | About Us | Login

Home Energy Scoring Tool

The Department of Energy's Home Energy Scoring Tool allows qualified assessors to:

- Generate clear, credible home energy assessments at a reasonable cost;
- Recommend customized upgrades and other cost saving tips; and,
- Help consumers compare the energy use of different homes.

The Home Energy Scoring Tool is quick and easy to use. Qualified assessors can gather the information needed to assess a home in one short site visit. This low-cost, high value assessment can be provided as a stand-alone service or as an add-on to a home inspection or comprehensive energy audit.

For more information on how to become a qualified assessor or receive a home energy score, visit www.homenergyscore.gov.

The Home Energy Saver Tool was developed by the Lawrence Berkeley National Laboratory in collaboration with the U.S Department of Energy under the American Recovery and Reinvestment Act (ARRA). The Modeling Engine for Home Energy Saver can be licensed as an API through the Lawrence Berkeley National Laboratory.

# HPwES Program Sponsor Map **ENERGY**

HOME PERFORMANCE WITH

ENERGY STAR

energy

Energy Efficiency & Renewable Energy

**Program Goals:** 

1) Retrofit 60,000 homes in 2012, 2) Identify lessons learned based on deployment successes and failures, and 3) transition unsuccessful grantees to sustainable models.

# **DOE Resources for Program Sponsors**

- Provide current HPwES news, information, and relevant documents
- Regional Account Managers
- Provide technical support
- Encourage Sponsor feedback
  - Ability to help guide future development of HPwES
- Coordination with other federal programs
  - Support integration with Home Energy Score and Guidelines for Home Energy Professionals
  - Provide research opportunities through Building America teams
  - Share lessons learned with the Better Building Neighborhood Program
  - Link to national laboratories

# The Solar Decathlon Enhances Energy Efficiency Education & Awareness

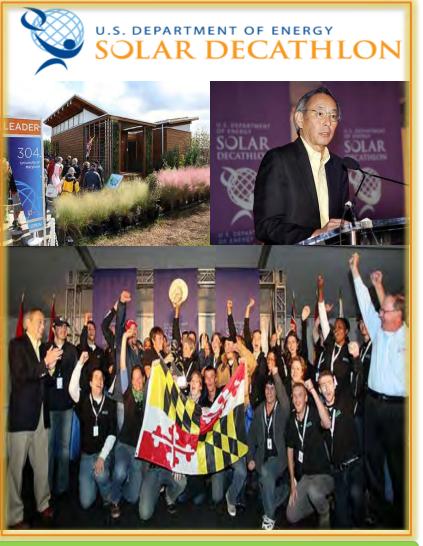

Energy Efficiency & Renewable Energy

DOE's Solar Decathlon is an awardwinning program that challenges collegiate teams to design, build, and operate solar-powered houses that are cost-effective, energy-efficient, and attractive

Highlights:

- The 2011 event had over 357,000 house visits in 10 days
- Over 4,000 middle school students toured the houses
- 250 articles appeared in nearly 150 print publications worldwide
- 500 television interviews worldwide and 87 radio interviews

# Irvine, California has been selected as the site for the 2013 Solar Decathlon

First Place Winner – University of Maryland

# 2013 Solar Decathlon Teams

- <u>Arizona State University</u> and <u>The University of</u>

# U.S. DEPARTMENT OF ENERGY

# Model Energy Codes: 50/70/90 Goals

#### 50% Goal of Increased Energy Savings

- Cost-effective, Product Neutral and Increase Usability
- Exploring performance-based options
- Alternative paths to compliance

Progress: Achieved 30% in IECC 2012 and 90.1-2010

#### 70% Initiative for Increased Adoption

- 40 states and territories to adopt ARRA target codes or most current model codes by 2015
- Progress: 27 adopted IECC 2009; 1 adopted 2012 IECC
  - 34 adopted 90.1-2007; 1 adopted 90.1-2010

#### 90% Compliance by 2017

- Demonstrate compliance with ARRA requirements
- Increase the number and availability of compliance guides, field measurement tools, and resources

**Progress:** Established and tested compliance methodology

50% Better Codes Proposed by 2013/2015

#### 70% Code Adoption by 2015

#### 90% Compliance by 2017

# Building Energy Code Program Activities FY12

Research & Development Activities	Deployment Support		
Commercial Code Development	Adoption-Technical Assistance to States:		
<ul> <li>Submit code proposals towards 50% goal</li> <li>Provide technical performance indicator analysis to support code development</li> <li>Residential Code Development</li> <li>Publish Residential Cost-Effectiveness Methodology to evaluate the energy and economic impacts of codes</li> <li>Develop code change proposals to update the IECC</li> </ul>	<ul> <li>State specific adoption and compliance plans</li> <li>Analysis of energy savings associated with adoption of new codes</li> </ul>		
	<ul> <li>Analysis of first cost impacts and cost- effectiveness associated with adoption of new codes</li> <li>Comparative analysis of future code options</li> <li>Development of Resource Guides Series</li> </ul>		
towards the 50% goal <b>Rulemakings</b> – Final 2012 IECC Determination currently at OMB	<b>Compliance-</b> Support states as they work to demonstrate compliance:		

- Preliminary Determination for 2012 IECC published in October 2011
- Final rules for Fossil Fuel, Sustainable Design, Federal Building Efficiency Standard (90.1-2010); all final rules at OMB
- Manufactured Housing NOPR is at OMB
- Federal Building Efficiency Standard (2012 IECC) to be issued in 2012

#### National deployment of compliance tools and assessments at state level

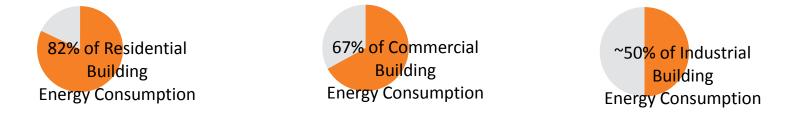

- Development of customized training materials for state codes
- Web-based and in-person training on the national model codes and state codes
- State-specific energy codes in <u>REScheck</u>
- State-specific energy codes in <u>COMcheck</u>

.

# What does the Building and Equipment Standards Program Cover?

**ENERGY** Energy Efficiency & Renewable Energy

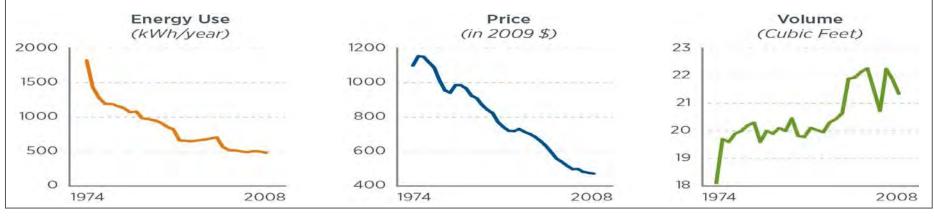

Over 50 products are covered by DOE's Building and Equipment Standards program. These are known as "covered products." Covered products are responsible for:

Because of the successful standards put into place by the Building Technologies Program, today's refrigerators use only about 30 percent of the energy that was required to power models built in 1975.

Compared to those 1970's models, today's refrigerators **save the nation about \$20 billion per year** in energy costs, or \$150 per year for the average American family.

The next proposed increase in refrigerator and freezer efficiency– scheduled to take effect in 2014– will save the nation almost 4.84 quadrillion Btu over 30 years. That's the equivalent amount of energy savings that could be used to power a third of Africa for an entire year.

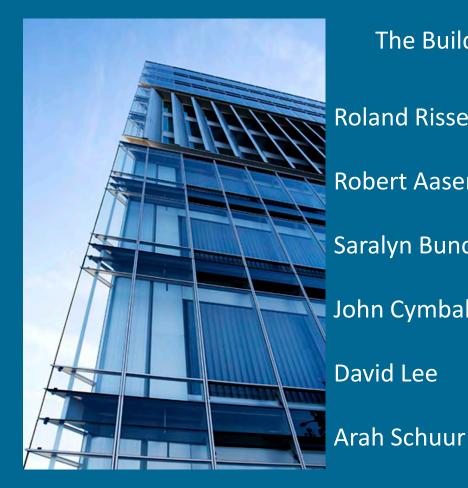

34 | Building Technologies Program

### Accomplishments

- Through the energy saved since the first Federal standards in 1987, DOE has helped avoid the construction of up to 31 power plants....the same amount of electricity consumed annually by Spain
- Standards that went into effect from 1988 to 2006 will have an estimated cumulative energy savings of 39 quads by 2020, and 63 quads by 2030
- Cumulative net present value of consumer benefit amounts to:
  - \$64 billion at the end of 2005
  - \$150 billion as of 2010
  - \$241 billion by 2030
- The program has delivered more than \$650 in net savings for every federal dollar spent; consumers and businesses are saving \$15 billion a year as of 2010 and this is expected to nearly double by 2025
- Annual carbon savings reach 38 million tons by 2020 and the cumulative savings by 2045 is estimated at 1,200 million tons
